

AI on the Streets

A one-page overview for parents, families, and community members

COMMUNITY

ONE-PAGE
OVERVIEW

What Is This Project?

AI on the Streets: Smarter Signals, Smarter People is a Girl Scout Gold Award project that teaches K-12 students about artificial intelligence, smart traffic systems, and cybersecurity through hands-on workshops, an interactive website, and a live traffic-simulation tool built from original research.

What Is the Gold Award?

The Girl Scout Gold Award is the highest honor in Girl Scouting. To earn it, a Girl Scout identifies a real community need, researches it deeply, designs a sustainable solution, and leads its execution, typically requiring 80+ hours of independent project work, mentorship, and community partnership.

What Happens at a Workshop?

- Students explore **three real traffic-control strategies**, Fixed Timer, Sensor-Based, and AI Adaptive, using an interactive simulation built from original Python research.
- Age-appropriate sessions run from 45-90 minutes and are tailored for elementary, middle, and high school audiences.
- Students complete short knowledge checks on AI basics and cybersecurity, and reflect on how smart technology could help their own community.
- All materials are free, and no prior technology background is required.

Why Does This Matter?

The Bigger Picture

AI already manages traffic, healthcare systems, and online safety in cities everywhere. Giving students an early, hands-on understanding of how these systems work, and how to think critically and ethically about them, builds both digital literacy and interest in future STEM careers.

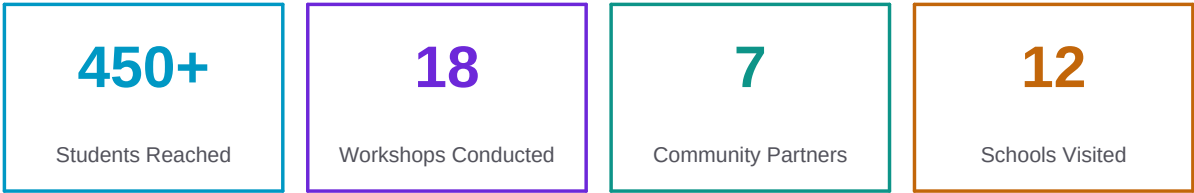

How You Can Get Involved

For Schools & Teachers

Request a free workshop through the website's Workshops page. Sessions can be scheduled for a single class or a full grade level.

For Parents	Visit the website with your student and try the AI Traffic Simulation together, or explore the Learn AI and Cybersecurity sections as a family activity.
For Community Partners	Reach out about hosting a community workshop or providing feedback on the project's impact.

Project Impact So Far

Learn More & Get In Touch

Visit the **AI on the Streets** website to explore the full simulation, lesson resources, and to request a workshop for your school or organization. We welcome feedback from every event, your input helps us improve and demonstrates real community impact for the Gold Award review process.
